

RFID Is Evolving and Queralt Is Leading the way

Physical Asset Management Solutions

Need a better way to track infusion pumps, ventilators and monitor temperature of expensive drugs, blood products and lab samples. Look to Asset Monitoring Solutions to help guide you in your decision making process to understand today's rapidly changing wireless technology. Eliminating your manual data collection process to a real time, notification and alert driven solution can enable a dramatic improvement in your facility's operation. With relationships with leading offering wireless technology from industry leaders like RF Code, Motorola, CenTrak, Confidex, Impinj and others, consider Queralt as your source for balanced information to choose the optimal technology for your environment.

Why consider RTLS (Real Time Location Tracking) to track and monitor equipment, patients, staff and monitor freezer and refrigerator temperature?

- Real time visibility of all inventory, location and status insuring availability and timely PM
- Improve equipment utilization, reduce and more effectively manage PAR levels and lower CAPEX
- Ensures Regulatory Compliance** – Automated and complete documentation to meet JCAHO, CAP, AABB, DHS, HACCP, FDA 21 CFR Part 11 compliance for freezer and refrigerator monitoring
- Know immediate location of patients for wander prevention their and status
- Reduce patient length of stay (LOS) Increase staff efficiency Enhance security of assets

Typical System Components:

- Wireless Tags and Sensors
- Receivers
- Locators
- Software with Open API's

Locate Medical Equipment

Find Doctors, Nurses & Patients

Typical Solution Features:

- Web User Interface
- Hierarchical view of assets and environment by type and location
- Automated alerts regarding asset status and location via multiple communication protocols

Sensor functions:

- Motion, Tamper, Humidity, Temperature, Panic
- Sterilizable
- Infrared sensing for sub - room level visibility

Advanced Reporting Capabilities

- Vendor specific application
- Integration to nurse call station
- Business process application interoperability
